DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I, (claims 1-8) in the reply filed on 10/13/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Specification

2. The disclosure is objected to because of the following informalities: At page 1, line 5, the continuing data needs to be updated because the application serial No. 09/857,062 is now US patent 6,638,440.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Schaefer et al (4,299,860).

Schaefer et al disclose a process including the step of exposing a substrate with a laser beam, which resemble with the claimed monochromatic light in order to form melted or shallow pool (16) pattern-wise on the upper surface of the substrate and

Art Unit: 1765

subsequently injecting particles (22) for depositing on the pool or in the melted area through a nozzle (24), wherein the laser beam is in relative movement with the substrate to be locally melts with controlled depth and width (col.1, line 66-col.2, lines 10 and figure 1).

Schaefer et al also suggest that the particle with a liquid pool can be solidified to form the coating of particles on the melted area on the substrate (col.3, lines 42-45).

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1-8 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3,11-21 of U.S. Patent No. 6,638,440.

Although the conflicting claims are not identical, they are not patentably distinct from

Art Unit: 1765

each other because the invention in patent 6,638,440 broadly encompasses the instant invention.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Makita (5,897,719) teaches a process of laser beam irradiation on a metal substrate to form grooves (2a) and subsequently filled with particle (5) to form indented surface;

Bleacher et al (4,515,867) disclose a process of treating glass substrate using laser beam on a coated glass substrate.
